

NetworkingPS Websphere MQ Business Integration Services Overview

The IBM Websphere MQ product suite is the trusted market leader in messaging solutions, delivering reliable application integration for both applications and web services. In addition to creating a reliable, auditable messaging backbone for your organization's applications, IBM Websphere MQ can also be leveraged as the connectivity layer of a service-oriented architecture (SOA) and common transport mechanism for your enterprise services bus (ESB).

At NetworkingPS, our consultants have the experience and advanced expertise to design and build innovative and resilient middleware messaging solutions for small and medium businesses to large, complex organizations, across all industry types. When you bring one of our consultants into your business environment, they will acquire both the IT knowledge and business requirements necessary to design innovative solutions which will advance your strategic business objectives. This includes developing a blended-combination of technology and business solutions encompassing service definitions, service level expectations/agreements, and timeframes.

Like all our services offerings, NetworkingPS is committed to providing our customers with consultants at highly competitive rates, who have a proven history of success and a reputation for thought leadership and advanced project execution skills. Our consultants have the ability to define, design and deliver winning business development solutions.

Product Expertise

Our IBM Business Integration consultants have an advanced level of expertise and a proven history of success in implementing the following IBM Websphere integration products:

- Websphere MQ
- WebSphere MQ Integrator
- WebSphere Business Integration
- Message Broker
- MQ Link for R/3

Supported Operating system(s):

**AIX; HP-UX; Linux; OS/390; OS/400;
OpenVMS; Solaris; TRU64 UNIX; Tandem
NSK; VSE; Windows; z/OS**

"Both MQSeries and MQSI provide a range of powerful functions 'off the shelf'. Together with MQSeries connectors, we were able to just pick the products we needed to integrate all our new applications and very quickly transform our IT environment"

- Jamey Salsberg, CEO, Best Buy

Comprehensive Service Offerings

Our highly qualified staff can provide you with the following services:

- Performing requirements gathering and mapping requirements to capabilities of a software solution
- Developing custom IBM Websphere MQ and Message Broker based solutions and roll-out strategies for enterprise-wide integration deployments
- Designing and administering high availability IBM Websphere MQ and Message Brokering architectures within distributed/midrange environments on a wide array of platforms/operating systems
- WebSphere MQ administration, implementation, optimization, and tuning
- WebSphere Message Broker administration, implementation, optimization, and tuning
- Testing and troubleshooting existing WebSphere MQ or Message Broker environments
- Creating custom workflow applications and integrating existing ERP, CRM and custom applications
- Building extensive business integration and interoperability architectures including messaging middleware/EAI packages
- Conducting IT systems management/monitoring vendor analysis and recommendations to fit your requirements
- Providing strong technical management leadership and mentoring skills
- Analyzing and designing usage methodologies for MQ-based or message-oriented applications
- Offering mentoring, training, skills transference and proven methodologies for subsystem, resource recovery and maintenance in regards to IBM Websphere MQ family products
- Creating customer guidelines (best practices) for architecture, administration, application design/development and systems management monitoring of various message-oriented enterprise application integration products and solutions
- Assisting in project planning, scheduling and budgeting activities

People

NetworkingPS employs communicative, certified, and experienced business integration consultants that possess requirements gathering, architecture, development, administration, and analysis skills with IBM's WebSphere integration products. Our competency lies in the ability to design and implement loosely coupled message-oriented middleware infrastructures to support the success of your enterprise application integration project.

NetworkingPS is a premier IBM Business Partner with extensive knowledge in message-oriented enterprise application integration. Our proven business integration capabilities and experienced consultants will lend yield to solutions producing greater operational efficiencies, speeding your time to market and reducing time to value of your integration solution.

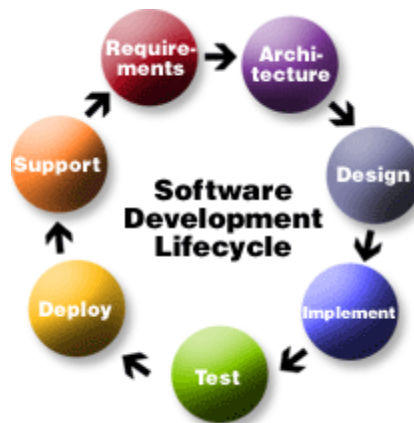

About NetworkingPS

NetworkingPS is a mid-sized Information Technology professional services firm based in Piscataway, NJ, specializing in a wide variety of managed security services offerings. Leveraging their highly-skilled staff of professional consultants, NetworkingPS has earned a reputation for their proficiency in planning, designing, assessing, implementing and supporting systems, applications, networks and operations activities for their nationwide, cross-industry client base. Industry research shows that clients today want an open computing environment in conjunction with an open marketplace with alternate channels of distribution. In addition, organizations wish to integrate new technology into their existing systems, as well as have both their computing resources and user base managed and supported in a cost-effective manner that will support their business priorities.

NetworkingPS is responding to these customer requirements by focusing its resources on helping customers plan, build, implement and maintain the business information systems, networks, and operations they need to compete in today's changing business environment. Building on its core competencies in software, systems, networks, and services, NetworkingPS provides a complete range of information processing solutions.

We needed something that was flexible enough to cope with a variety of different platforms, spread over several States. We want to be able to plug in additional systems as they are developed, without a major upheaval and fairly cheaply.

With MQSeries and MQSeries Integrator, we have assured messaging across as many as 35 different platforms"

- Jeff Lovelace, Senior Data Architecture Consultant, AAA Michigan
